The mission of the Oregon Department of Corrections is to promote public safety by holding offenders accountable for their actions and reducing the risk of future criminal behavior.
Purpose of the Agency

The mission of the Oregon Department of Corrections (DOC) is to promote public safety by holding offenders accountable for their actions and reducing the risk of future criminal behavior. DOC operates two distinct areas: prisons and community corrections.

- DOC operates 14 correctional facilities across the state in a manner that keeps them safe, civil, and productive. Adults in custody (AIC) attend programs, participate in work assignments, and engage in treatment and other activities specified in their corrections plans.

- DOC partners with counties to provide supervision, sanctions, and correctional interventions for felony offenders on transitional leave, probation, parole, or post-prison supervision in the community.

Programs that Must Comply with SB 267

The definition of prison-based programs that must comply with Senate Bill 267 is as follows: A program is an organized activity in an institution, facilitated by an employee or contractor, designed to either create internal or external change in an AIC or to teach a behavioral or thinking skill, or both. A workgroup representing DOC programs, institutions, and community corrections reviewed all activities provided within the prison system to determine which should be considered programs, and thus which should be evaluated for consistency with evidence-based practices.

The prison programs that must comply with SB 267 are:

- Alcohol and drug treatment
- Cognitive change programs
- Parenting skills training

Community-based programs that must comply with SB 267 were identified by the Community Corrections Commission. The Commission is a broad-based advisory group to DOC on policies relating to community corrections. Membership includes representatives from county community corrections agencies, county commissioners, sheriffs, the Board of Parole, the Criminal Justice Commission (CJC), and a crime victim advocate. The group reviewed all activities identified in each county's community corrections plan and identified those programs that had a primary purpose in the reduction of recidivism. The programs identified will be reviewed to determine if they are evidence-based.

The community-based programs that must comply with SB 267 are:

- Alcohol and drug treatment
- Cognitive change
- Parenting skills training
- Mental health care
- Sex offender treatment
- Domestic violence intervention
- Employment
- Anger management
- Life skills

**Progress to Date**

DOC and the Community Corrections Commission identified the Corrections Program Checklist (CPC) as the appropriate tool to determine if programs are evidence-based in the way they are being designed and delivered. The CPC uses 78 questions to assess the effectiveness of a program. The CPC instrument measures a program's adherence to the "Principles of Effective Correctional Intervention" – those program characteristics which research shows are highly correlated with a reduction in recidivism. The CPC is grounded in risk, need, and treatment principles.

During the 2013-15 Legislative Session, the Legislature re-established funding for a 1.0 full-time employee (FTE) position to increase DOC’s program evaluation capabilities. DOC currently has two FTE dedicated to program evaluations and has trained more than 10 parole and probation personnel to assist with evaluations statewide.

Prison and community corrections employees continue to utilize validated risk instruments to determine AIC/offender risk to reoffend, and what programs would be most impactful to assist with behavior change. As the use of risk assessments has increased, both in-custody and community programs are receiving more appropriate referrals which reflect those at greatest risk to reoffend and those who would benefit most from responsive programs such as alcohol and drug treatment, sex offender treatment, and domestic violence interventions.

**Research Basis for Program Evaluations**

Correctional programs intended to reduce re-offending in either the institutional or community setting are guided by the same body of research. There have been a series of large scale meta-analytic studies of correctional interventions resulting in some very strong evidence as to what type of interventions will have the greatest effect on lowering recidivism. In order to be included in the meta-analysis, each study had to meet a level of rigor in the research design, including a control and an experimental group, a standard measure of recidivism, and a post-treatment follow-up period.

This research identifies three principles of intervention associated with effectiveness in reducing recidivism. They are:

1. **Principle of Risk: Who to Treat**
   a) Services are delivered to offenders with a higher risk to recidivate; services are not delivered to offenders with a lower risk to recidivate.
   b) Risk assessment is accomplished through use of a standardized and validated tool.
2. Principle of Criminogenic Need: What to Target
   a) Risk factors associated with criminal behavior are assessed.
   b) At least 80 percent of the program’s services and interventions are designed to
target criminal risk factors and behaviors.
   c) More intensive services are provided to higher-need offenders.

3. Principle of Responsivity: How to Deliver the Service
   a) The program uses treatment models which demonstrate effectiveness in reducing
   recidivism.
   b) The program is between three and 12 months in duration (not including aftercare).
   c) The program uses written treatment manuals and curricula.
   d) The program incorporates positive reinforcement as well as effective discipline (4-to-
   1 ratio).
   e) The program teaches offenders to:
      a. Monitor and anticipate problem behavior;
      b. Plan and rehearse alternatives to problem behavior; and
      c. Practice alternatives to problem behaviors in increasingly difficult situations.
   f) Completion criteria is based on the acquisition of pro-social skills.
   g) The program refers clients to other services and agencies to help address their
   needs.
   h) The program trains family members to assist offenders.
   i) Aftercare is provided.
   j) Staff in the program are college-educated, experienced, well-trained, and well-
supervised.

This body of research, and the knowledge gained from it, resulted in the development of the CPC.
This tool provides a relatively objective measure as to whether a program is being designed and
delivered consistently with the meta-analysis findings.

Since the passage of SB 267, a total of 263 program evaluations have been completed on 125
unique programs. From July 2016 to June 2018, there were a total of 25 program evaluations
completed on in-prison and community programs; 22 of these evaluations were performed on
state General Funded programs.

Prison programs include residential alcohol/drug treatment, parenting, and cognitive
restructuring. Community programs include substance abuse treatment (including drug courts),
sex offender programs, cognitive restructuring programs, mental health programs, anger
management, and domestic violence treatment.

Scoring Guide:
1 = Satisfactory (55% or higher)
2 = Needs Improvement (46-54%)
3 = Unsatisfactory (less than 46%)
Results: CPCs on Funded Programs July 2016 - June 2018

State-Funded Programs Reviewed

Community Programs, 20, 91%

Prison Programs, 2, 9%

Results of State-Funded Prison and Community Programs Reviewed

Satisfactory, 5, 23%

Needs Improvement, 5, 23%

Unsatisfactory, 12, 54%
During the reporting period, prison-based programs received a Needs Improvement and Unsatisfactory score. This graph removes the prison programs to clearly display the outcomes of community-based programs.

**Unfunded Programs Reviewed**

- **Alcohol/Drug Treatment/Drug Courts**, 2, 67%
- **Sex Offender**, 1, 33%

Community corrections agencies require all programs to which they refer clients to meet the standards of the CPC. Therefore, DOC conducts evaluations of non-funded programs when requested and as resources permit.
Cost Effectiveness

During the 2015-2017 biennium, the Pew-MacArthur Results First Initiative, CJC and DOC built a cost-benefit model that examined criminal justice programs based on how well they reduce recidivism. In this model, the costs of each program are weighed against its monetized benefits, which come from avoided costs of recidivism due to the program’s effectiveness at changing offender behavior. One key piece of information agencies have been able to calculate is the cost-benefit ratio for each program, which shows how much money is saved for every dollar invested. The model also allows data analysis to show expected cash flows on an annual basis, which can further be separated out by whether the benefits impact the state versus the local government, taxpayers versus potential victims, and caseloads for each part of the criminal justice system.

In the first phase of Oregon’s participation in the Results First Initiative, data was collected on Oregon-specific recidivism patterns, sentencing patterns, and costs of the criminal justice system. Program information (including costs) for four categories of evidence-based DOC programs were also collected and utilized: inpatient alcohol and drug treatment, outpatient alcohol and drug treatment, cognitive-behavioral treatment, and vocational education. For program effectiveness, DOC and CJC used national estimates based on the best research available. This first phase was completed in May 2016 and presented to the Joint Committee on Judiciary on May 25, 2016. As shown in the table below, each of the four program types was found to be cost-beneficial with benefit-to-cost ratios ranging from $5.12 to $14.40. Assuming programs are achieving the
expected effectiveness, this means that for every dollar invested in DOC programs, a minimum of $5.12 of costs are avoided due to reduced recidivism.

The next phase of analysis will indicate if improvements need to be made to the programs to obtain optimal performance. DOC and CJC are also adding two program areas to the model: correctional education and correctional industries. The second phase is expected to be complete by the end of 2019.

**Next Steps**

As mentioned above, DOC will continue to partner with CJC on the second phase of the Results First Initiative. Additionally, DOC will continue to use the CPC to determine if programs are evidence-based in the way they are designed and delivered. As for community-based programs, DOC will continue to prioritize programs which have not received a CPC and are funded with state dollars, as well as those that have been identified as needing improvement in the last year.
