

Phase One Reopening Guidance

Sector: Transit

Specific Guidance for Transit Agencies:

Transit agencies are required to:

- Require at least six (6) feet of physical distance between passengers.
- Require at least six (6) feet of physical distance between the driver and passengers (except during boarding); reinforce this requirement by cordoning off seats as appropriate.
- Use physical partitions or visual cues (e.g., floor decals, colored tape, or signs) to discourage passengers from standing and sitting within six feet of other passengers, drivers and other transit employees on the bus/train.
- Determine, post and adhere to maximum occupancy for each bus/train.
- Do not allow passengers who are actively coughing to use public transit.
- Establish a policy and practice for providing alternate transportation for riders who are ill and need transportation to obtain medical care that limits possible exposure to transit employees and other members of the public.
- Post clear signage (available at healthoregon.org/coronavirus) at transit stops/centers listing COVID-19 symptoms, asking riders with symptoms to stay home and who to contact if they need assistance. If travel is necessary, please use alternate transit, if available.
- Require cloth face coverings for all passengers.
- Require drivers and other transit employees on bus/train to wear medical grade masks
- Provide:
 - Medical grade masks for drivers and other transit employees on bus/train.
 - Cloth face coverings to other transit employees (not on the bus/train) that regularly interact with the public.
 - Disposable or cloth face coverings to any passenger that does not have one.
- Provide transit employees access to soap, clean running water and drying materials, or at least 60-95% alcohol-based hand sanitizer at their worksite.
- At least every two (2) hours, disinfect frequently touched surfaces of the bus/train and at transit stations. Wipe down frequently touched surfaces of bus/train after completion of each run.

To the extent possible, transit agencies should:

- Require one-way flow of traffic with front door boarding and rear exiting.
- Use signage at stops to encourage physical distancing while waiting for bus/train.
- Install hand sanitizer stations with 60-95% alcohol-based hand sanitizer solution in each bus/train to the extent possible.
- Review and implement [General Employer Guidance](#), as applicable.
