

Heart Disease in Oregon

Since 2000, heart disease among Oregon adults has decreased slightly (from 4.7% in 2000 to 3.4% in 2014).

Approximately
126,400
adults

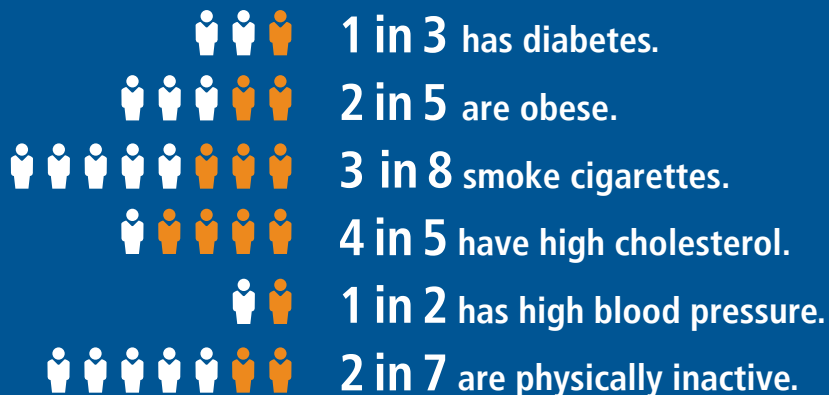

in Oregon have heart disease, which is the second leading cause of death in Oregon.

Heart disease costs Oregonians more than \$700 million in hospitalizations.

Certain risk factors can worsen existing heart disease and ultimately lead to heart attack and stroke.

Among Oregon adults with heart disease:

HEART DISEASE affects some communities more than others.

Compared to adults with a college degree, adults with less than a high school education are:

2–3x
as likely to have heart disease.

Compared to non-Latino whites, African American, American Indian and Alaska Native people are:

2x
as likely to have a heart attack in their lifetime.
