

Secretary:

Executive Appointments. The Department of Water Resources has been in a state of disaster for four years even after a \$500 million legislative infusion. Nothing has changed. Using past failures in the name of stability with tough questions being the solution is not a stake in the ground as stated in debate. The Public Utility Commission support of utility rates expanding homelessness is the #1 constituent complaint in my low-income district. At the same time, utility entities are at record funding if not profits. Citizens are fed up as the record low voter turnout just displayed. Something is going to break. Manufacturing is collapsing. Status quo is no longer acceptable. Utility rates must go down not up. The last no vote group of medical boards need completely reformed prior to new appointees after recent court decisions showing the alleged pandemic was a very profitable pandemic. Future prosecutors will determine if past events were crimes against humanity and genocide or not. The legislature needs to pass solutions.
