

Secretary: Vote Explanation. Thanks, Sen Boquist

HB 3309 is simply wrong. It allows local government to build unsafe facilities in tsunami zones to save them money. The deaths that will result by building new emergency services facilities that will be destroyed, with deaths, will and should make the city, county and state liable for the deaths. This started two sessions ago allowing OSU to build on liquified Newport Bay so future students will die in a future tsunami. It is clear, the State of Oregon really does not care about tsunami preparation nor the lives of its citizens. Bad policy.
